Dear Colleague,

African Journal of Engineering Research requests your kind assistance in reviewing a manuscript titled: Detailed project report of designing a flexible pavement including cross drainage work of a village road near suburb of Bhubaneswar.

We wish to find out if you can create time to review this manuscript and send it to us within ten days.

Find the abstract below:

Abstract

A Detailed Project Report (DPR) of a village road which is to be built on an earthen road connecting Niranjanpur village to Sundarpada-Jatni Main Road having a length of 1.45 km. This will help in providing all-weather connectivity to the people residing in the nearby villages. The existing earthen road is of very low quality with undulations and depression all along. The road passes through laterite quarries and rain fed forest. During rainy season, most part of the road remains muddy and some parts are submerged in rain water due to poor drainage system. This proposal is to provide a flexible pavement for the entire length of this earthen road connected with a drainage system for a stretch of 400 m. A slab culvert is also designed for the project road having a span of 3 m as per the requirements. This report includes all the parts regarding soil & material testing, pavement designs, drainage & culvert designs including drawings and estimations.

Thank you for your time and consideration. I look forward to hearing from you.

Best regards,

Dr. John Afa
